Product Description

Special-Shaped Seamless Steel Pipe For Structural Parts, Tools And Mechanical Parts

The special-shaped seamless steel pipe is a general term for seamless steel pipes of other cross-sectional shapes other than round pipes. According to the different shapes and sizes of the steel pipe section, it can be divided into equal-wall thickness shaped seamless steel pipes (code D), unequal-wall thickness shaped seamless steel pipes (code BD), and variable-diameter shaped seamless steel pipes (code BJ). Shaped seamless steel tubes are widely used in various structural parts, tools and mechanical parts. Compared with the round pipe, the special-shaped pipe generally has a larger moment of inertia and a section modulus, and has a greater resistance to bending and torsion, which can greatly reduce the structural weight and save steel.
