Product Description

Precision Steel Warehouse Stainless Steel Seamless Tube Pipe Precision Steel Pipe

The processing technology of stainless steel seamless pipes mainly includes hot-rolled drawn pipes and cold-rolled pipes. Hot-rolled seamless drawn pipes are generally also called thermal expansion, which means using abrasive tools to expand and round the stainless steel pipes. On the contrary, cold-rolled pipes have a fixed mold outside the pipe and a fixed mandrel in the inner hole of the pipe, which makes the thickness of the pipe thinner from the outside to the inside.
