Product Description

ASTM A519 1010 - 1045 SAE 1018 Seamless Mechanical Steel Tubing For Hydraulic Components

Mechanical pipelines are divided into mechanical hoses and hard pipes, but each has its own advantages and disadvantages in terms of structural characteristics and use effects. Hard pipes have a larger bending radius than hoses, can withstand higher temperatures, and have a more compact layout. However, hoses have better shock absorption, better flexibility, and can connect moving metal parts than hard pipes.
